CAREER OBJECTIVES

- Aspiring to contribute as a valuable team member, I focus on fostering collaboration and tackling intricate technological challenges with precision.
- Seeking a career at the forefront of emerging technologies, I emphasize continuous learning and development.
- I have worked as a Front End Developer for a few Companies by delivering the website as expected and have helped my college in developing a website.
- I have also provided web designs to various clients

PROJECTS

Allis5ne

Full Stack Website and Mobile app

- Allis5ne is an advanced mental health analysis application
- Periodic assessments are given, specifically utilizing the DASS-42.
- Upon analysis, Allis5ne tailors a personalized, gamified solution for users, fostering healing progress through a reward-based system with professional support for SIH.

Health Harbour

Full Stack Website with Machine Learning

- The website is a Hospital Management System built for a national hackathon.
- The website consists of live doctor appointment booking which a patient can use to consult a doctor of their choice at their convenient time.
- The website provides additional support through patient report analysis.
- Patient medical process suggestions are implemented using ML Algorithms.

Daksha 3.0

Full Stack Website

- The website is built for the students of Anurag University as a one-stop platform for registering for any event.
- Daksha is a Techno fest held at Anurag University and this website provides all the details of every event and provides a mechanism to register through secure payment gateways embedded into the website.

ACHIEVEMENTS

1st in VJ Hackathon VNRVJIT, National Hackathon, won Cash Prize of 50,000

1st Runner Up in Innovasia Vasavi, National Hackathon

1st in UnCease Hackathon Anurag University, University level Hackathon
